3.3V/5V, Dual-Channel 1A Current-Limited Power Distribution Switches

The Future of Analog IC Technology

DESCRIPTION

The MP62340/MP62341 Power Distribution Switch features internal current limiting to prevent damage to host devices due to faulty conditions. The MP62340/MP62341 load analog switch has $80m\Omega$ on-resistance and operates from 2.7V to 5.5V input. It is available with guaranteed current limits, making it ideal switching applications. load MP62340/MP62341 has built-in protection for both over current and increased thermal stress. For over current, the device will limit the current by changing to a constant current mode.

As the temperature increases as a result of short circuit, then the device will shut off. The device will recover once the device temperature reduces to approx 120°C.

The MP62340/MP62341 is available in 8-pin MSOP package with exposed pad and SOIC package without exposed pad.

FEATURES

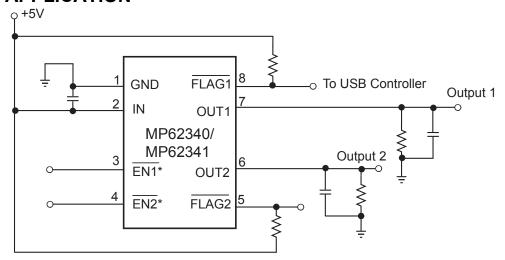

- 1A Continuous Current
- Accurate Current Limit
- 2.7V to 5.5V Supply Range
- 140 μA Quiescent Current
- 80mΩ MOSFET
- Thermal-Shutdown Protection
- Under-Voltage Lockout
- 8ms FLAG Deglitch Time
- No FLAG Glitch During Power Up
- Reverse Current Blocking
- Active High & Active Low Options
- Available is MSOP8E and SOIC8

APPLICATIONS

- PDAs
- Portable GPS
- Notebook PC
- Set-top-box
- Telecom and Network Systems
- PC Card Hot Swap
- USB Power Distribution

"MPS" and "The Future of Analog IC Technology" are Trademarks of Monolithic Power Systems, Inc.

TYPICAL APPLICATION

* EN is active high for MP62341

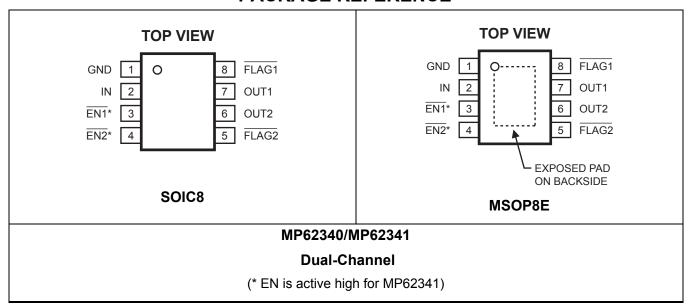

ORDERING INFORMATION

Part Number	Enable	Switch	Maximum Continuous Load Current	Typical Short- Circuit Current @ T _A =25C	Package	Top Marking	Free Air Temperature Range (T _A)
MP62340DS	Active				SOIC8	62340DS	
MP62340DH	Low	Dual	1A	1.5A	MSOP8E	62340DH	_40°C to +85°C
MP62341DS	Active				SOIC8	62341DS	-40 C to +65 C
MP62341DH	High				MSOP8E	62341DH	

* For Tape & Reel, add suffix –Z (e.g. MP62340DS -LF–Z). For RoHS compliant packaging, add suffix –LF (e.g. MP62340DS -LF–Z)

PACKAGE REFERENCE

ABSOLUTE MAXIMUM RATINGS (1)

IN	0.3V to +6.0V
EN, FLAG, OUT to GND	
Continuous Power Dissipation	$(T_A = +25^{\circ}C)^{(2)}$
MSOP8E	
SOIC8	1.4W
Junction Temperature	150°C
Lead Temperature	260°C
Storage Temperature	–65°C to +150°C
Operating Junction Temp (T _J)	. –40°C to +125°C

Thermal Resistance (3)	$oldsymbol{ heta}_{JA}$	$oldsymbol{ heta}_{JC}$
SOIC8	90	42 °C/W
MSOP8E	55	12 °C/W

Notes:

- 1) Exceeding these ratings may damage the device.
- 2) The maximum allowable power dissipation is a function of themaximum junction temperature T_J (MAX), the junction-toambient thermal resistance θ_{JA} , and the ambient temperature T_A . The maximum allowable continuous power dissipation at any ambient temperature is calculated by PD (MAX) = $(T_J$ (MAX) $T_A)/\theta_{JA}$. Exceeding the maximum allowable power dissipation will cause excessive die temperature, and the regulator will go into thermal shutdown. Internal thermal shutdown circuitry protects the device from permanent damage.
- 3) Measured on JESD51-7, 4-layer PCB.

ELECTRICAL CHARACTERISTICS (4)

V_{IN}=5V, T_A=+25°C, unless otherwise noted.

Parameter	Condition	Min	Тур	Max	Units
IN Voltage Range		2.7		5.5	V
Supply Current	One Channel Enabled, I _{OUT} =0, One Switch ON		90	120	μA
Supply Current	Both Channels Enabled, I _{OUT} =0, Both Switches ON		140	160	μA
Shutdown Current	Device Disable, V _{OUT} =float, V _{IN} =5.5V		1		μΑ
Off Switch Leakage	Device Disable, V _{IN} =5.5V		1		μΑ
Current Limit		1.1	1.5	2.2	Α
Trip Current	Current Ramp (slew rate≤100A/s) on Output	1.6	1.7	2.4	Α
Under-voltage Lockout	Rising Edge	1.95		2.65	V
Under-voltage Hysteresis			250		mV
FET On Resistance	I _{OUT} =100mA (-40°C≤T _J ≤125°C)		80	130	mΩ
EN Input Logic High Voltage		2			V

FLAG Output Logic Low Voltage	I _{SINK} =5mA			0.4	V
FLAG Output High Leakage Current	V _{IN} =V _{FLAG} =5.5V			1	μΑ
Thermal Shutdown			140		°C
Thermal Shutdown Hysteresis			20		°C
V _{OUT} Rising Time, Tr ⁽⁵⁾	V_{IN} =5.5V, C_L =1 μ F, R_L =5.5 Ω		0.9		ms
	V_{IN} =2.7V, C_L =1 μ F, R_L =5.5 Ω		1.7		ms
V _{OUT} Falling Time, Tf ⁽⁶⁾	$V_{IN}=5.5V$, $C_L=1\mu F$, $R_L=5.5\Omega$			0.5	ms
Turn On Time, Ton (7)	$V_{IN}=2.7V, C_L=1\mu F, R_L=5.5\Omega$			0.5	ms
•	$C_L = 100 \mu F, R_L = 5.5 \Omega$			3	ms
Turn Off Time, Toff (8)	$C_L = 100 \mu F, R_L = 5.5 \Omega$			10	ms
FLAG Deglitch Time		4	8	15	ms
EN Input Leakage			1		μA
Reverse Leakage Current	V _{OUT} =5.5V, V _{IN} =GND		0.2		μΑ

Notes:

- 4) Production test at +25°C. Specifications over the temperature range are guaranteed by design and characterization.
 5) Measured from 10% to 90% output signal.
 6) Measured from 90% to 10% output signal.

- 7) Measured from 50% EN signal to 90% output signal.
 8) Measured from 50% EN signal to 10% output signal.

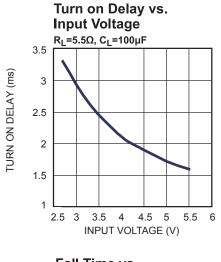

PIN FUNCTIONS

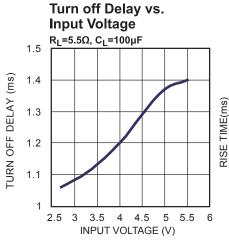

SOIC8 MSOP8E	Name	Description
1	GND, Exposed Pad (MSOP8E	Ground. MSOP8E includes exposed pad. Connect to GND plane for optimal thermal operation.
2	IN	Input Voltage. Accepts 2.7V to 5.5V input.
3	EN1	Active Low: (MP62340), Active High: (MP62341)
4	EN2	Active Low: (MP62340), Active High: (MP62341)
5	FLAG2	IN-to-OUT2 Over-current, active-low output flag. Open-Drain.
6	OUT2	IN-to-OUT2 Power-Distribution Switch Output.
7	OUT1	IN-to-OUT1 Power-Distribution Switch Output
8	FLAG1	IN-to-OUT1 Over-current, active-low output flag. Open-Drain.

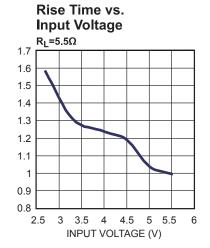

TYPICAL PERFORMANCE CHARACTERISTICS

Figure 2—Functional Block Diagram

DETAILED DESCRIPTION

Over Current

When the load exceeds trip current (minimum threshold current triggering constant-current mode) or a short is present, MP62340/MP62341 switches into to a constant-current mode (current limit value). MP62340/MP62341 will be shutdown only if the over current condition stays long enough to trigger thermal protection.

Trigger over current protection for different overload conditions occurring in applications:

- The output has been shorted or overloaded before the device is enabled or input applied. MP62340/MP62341 detects the short or overload and immediately switches into a constant-current mode.
- 2) A short or an overload occurs after the device is enabled. After the current-limit circuit has been tripped (reached the trip current threshold), the device switches into constantcurrent mode. However, high current may flow for a short period of time before the current-limit circuit can react.
- 3) Output current has been gradually increased beyond the recommended operating current. The load current rises until the trip current threshold is reached or until the thermal limit of the device is exceeded. MP62340/ MP62341 is capable of delivering current up to the trip current threshold without damaging the device. Once the trip threshold has been reached, the device switches into its constantcurrent mode.

Flag Response

The FLAG pin is an open drain configuration. This FAULT will report a fail mode after an 8ms deglitch timeout. This is used to ensure that no false fault signals are reported. This internal deglitch circuit eliminates the need for extend components. The FLAG pin is not deglitched during an over temp. or voltage lockout.

Thermal Protection

The purpose of thermal protection is to prevent damage in the IC by allowing exceptive current to flow and heating the junction. The die temp. is internally monitored until the thermal limit is reached. Once this temp. is reached, the switch will turn off and allow the chip to cool. The switch has a built-in hysteresis.

Under-voltage Lockout (UVLO)

This circuit is used to monitor the input voltage to ensure that the MP62340/MP62341 is operating correctly. This UVLO circuit also ensures that there is no operation until the input voltage reaches the minimum spec.

Enable

The logic pin disables the chip to reduce the supply current. The device will operate once the enable signal reaches the appropriate level. The input is compatible with both COMS and TTL.

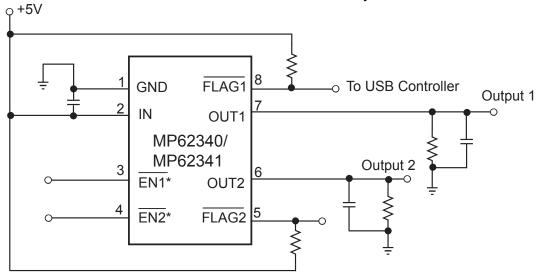

APPLICATION INFORMATION

Power-Supply Considerations

Over 10µF capacitor between IN and GND is recommended. This precaution reduces power-supply transients that may cause ringing on the

input and improves the immunity of the device to short-circuit transients.

In order to achieve smaller output load transient, placing a high-value electrolytic capacitor on the output pin(s) is recommended when the output load is heavy.
